SAFETY FIRST
If you are collecting the equipment for someone else please make sure this sheet is given to the equipment user to read. This sheet should be given to the site supervisor if the equipment is being hired for commercial use so that the information is available to all users. Before starting any job, be sure to spend a few minutes planning and understanding the hazards and risks of the activity and determining how you will control them to prevent injury or damage.

Starting Procedure
1. Turn ignition switch to On position
2. Turn fuel tap on (on some models)
3. Move throttle lever to half throttle
4. Ensure the Forward/Reverse lever is in the neutral position
5. Engage choke (cold start)
6. Pull start cord until a slight resistance is felt
7. Let cord recoil and give sharp pulls to start engine
8. Release choke when engine starts or fires
9. Re-pull start if required
10. Move throttle lever to the idle position
11. Allow engine to warm up

When Operating
- Keep both hands on controls at all times
- Move throttle lever to desired speed
  Note: maximum compaction is achieved with full throttle.
- Lift control handle to balance roller on its drum
- Proceed to move roller around area to be compacted by moving the forward reverse lever in the desired direction, the further you push or pull this lever the faster the travel speed will be
- To steer the roller pull or push on the main handle in the direction you want to go while the roller is moving
- If full vibration compaction is required turn the vibration function on once roller is moving
- At the end of the compaction line move the Forward/Reverse lever in the opposite direction or neutral to stop
- If you choose to stop ensure you turn the vibration function off

Stopping and After Use
- Idle engine
- Turn ignition switch to Off
- Turn fuel tap off (on some models)
