

AES Tornado 140/15

Product Description

The Tornado Heavy Duty range are fitted with a 2:1 reduction gear-box and low RPM Udor pump for long life and low maintenance.

We know from over 30 years experience servicing water blasters that these low RPM pumps consistently last many times longer than a direct mounted pump which operates at 3400 rpm.

An added bonus is that in addition to being suitable for connection to the mains (pressurized) water supply, these low RPM pumps will suck up to a 1 meter head (use our optional suction kit) allowing suction from a drum, tank, trough or stream.

Great for operation in Rural or Beach conditions where there is insufficient mains water supply.

Pump: Udor Low RPM crankshaft driven with brass head and ceramic plungers

Output: Maximum 140 Bar (2000 psi) 15 L/min

Engine: Honda GX200 OHV with low oil alert system

Gear-box: Udor reduction gear-box drive

Hose & gun: 10 Meter wire braided with couplers, gun with 900mm S/S lance & wash jet.

Pressure is adjustable and a chemical injector is fitted as standard

This is one of our most popular Low RPM (gear-box) units. Compact, portable and powerful with grunty 15 L/min water flow rate.
